## Comment

A complete crosswalk of procedural codes to BETOS categories is no longer available from CMS, but a historical version is hosted [here](#).

An alternative strategy – as used by Carter et al. (2017) – relies on receipt of select anesthesia services (00100-02101), along with exclusion criteria, to identify unneeded pre-operative chest x-rays. The appendix with specifications is [online here](#).

The Schwartz et al. approach was also used for identification of low-risk surgeries prior to receipt of laboratory testing. Other specifications for the identification of laboratory tests from:

## **Imaging for Uncomplicated Low-Back Pain within First Six Weeks**

Please see the relevant HEDIS measure, [NQF number 0052](#). Some specifications are available for download at the [eCQI Resource Center](#) (the age range may be broadened).

## **Use of More Expensive Branded Medications when Generics with Identical Active Ingredients are Available**

Specifications are not provided for this measure given the many potential approaches to calculating generic efficiency.
